**Subject:** RE: pellet fuel

60.5474(e) – would seem to imply that I must use a certified wood pellet residential use, but I don't see language in either the test methods or the rule that requires the use of a 3<sup>rd</sup> party graded pellet for certification testing.

60.5474(f) – seems to say you can burn a pellet if the unit was tested and certified with that fuel, which seems to imply if you can pass certification testing using an uncertified pellets, it's legal to burn an uncertified wood pellet.

Where did I take a wrong turn???

Lisa,

Pellet fuel requirements are listed in 60.5474(e).

Conversely, the requirements of 60.5474(f) imply that this same fuel type (standard) must be that used for the certification test.

Questions?

Stef

Mike and/or Stef, what are the pellet fuel requirements for certification testing.
